BRAKE BIAS DIAL

THE NEXT GEN REMOTE BIAS ADJUSTER

www.monitmotorsport.com

The Monit Brake Dial is a remote brake bias adjuster that has a built-in display allowing the driver to view the brake bias position at all times, even while driving. Drivers can 'zero' the display at their preferred balance position.

The always-on LCD display allows drivers of all abilities to have more confidence in adjusting brake bias while driving, enabling a greater range of drivers to fine tune and extract their optimal setup for the vehicle and conditions.

Changing track conditions, fuel load, tire wear etc can be regularly and accurately compensated for. Brake bias adjustment errors, where a driver turns a bias

adjuster the wrong way, can be eliminated by the clear indication of position given by the Monit Dial.

As a drop-in replacement for existing remote bias adjusters, the Monit Brake Dial adds visual and technological appeal to a race vehicle, while also providing a valuable extra tool to assist the driver in tuning the vehicle for track conditions and their personal preference.

Specifications

- Compatible with all balance bars and pedal boxes
- Water and dust resistant
- Supplied with a flexible shaft, balance bar adaptors and all fasteners.
- Battery powered with a 18month battery life on a user replaceable CR2032 coin cell.
- Display stays on, constantly showing bias position
- Sunlight viewable display with LED backlight mode
- Display range from -99 to +99 adjustment 'clicks'
- 2x separate user resettable '0' point settings, allowing for two different bias preferences for driver changes
- Bias is viewable relative to FRONT, REAR or Absolute positions.
- 45.5mm dial diameter, 24.0mm dial height.
