1. GENERAL DETAILS

The kit SADEV transmission ST90-17 CUPRA sequential is composed of 6 front speed + 1 reverse gear.

The weight of the complete gearbox is 36kg.

The kit includes:

- Self-locking differential
- Quick release» system to remove the differential cassette.
- External preload: Quick adjustment
- Retractable input shaft: easy maintenance
-
- Inspection bungs
- Oil pump.
- Slave cylinder.

1. RATIO CHARTS

The staging is approved by the manufacturer:

	1 st	Ref. E9014P1328915F	2 nd	Ref. C9017P1628915F	3 rd	Ref.C9017P1826915F	4 th	Ref. C9017P2024915F	5 th	Ref. C9017P2525915F	6 th	Ref. C9014P2521915F
Primary	13 (F9067187)	Ref. E9014P1328915F	16 (F9067151)	Ref. C9017P1628915F	18 (F9067174)	Ref.C9017P1826915F	20 (F9067172)	Ref. C9017P2024915F	25 (F9067179)	Ref. C9017P2525915F	25 (F9067184)	Ref. C9014P2521915F

Secondary	44	F9052204

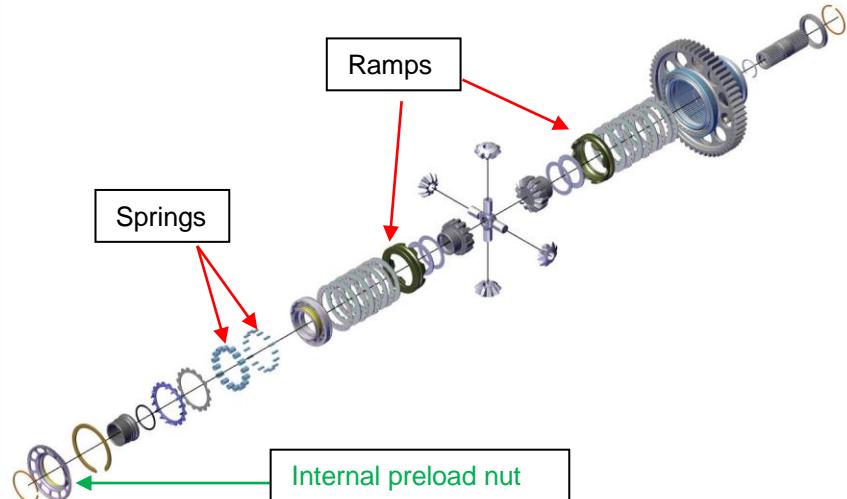

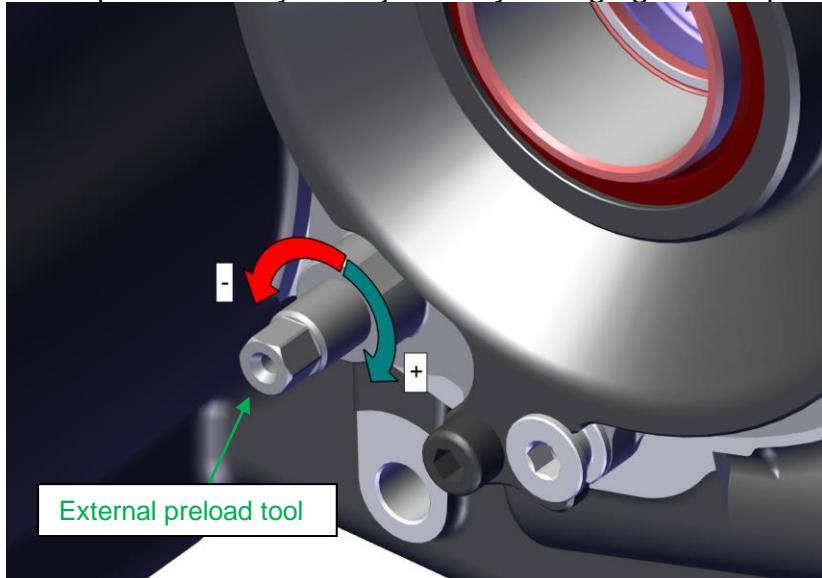

FINAL DRIVE			
Ref CPL15589067011	15	x	58

2. DIFFERENTIAL SET-UP

The differential is a self-locking type, with 6 frictions faces on each side and pressure plates with ramps, acting either for driving or braking phasis. The running clearance in the differential = $0.1 \pm 0.05\text{mm}$.

The preload may be adjusted by tightening / untightening the preload nut (internal or external) or by changing the springs. (16 small springs and 16 big springs).

The report ratio may be adjusted by changing the ramps: contact us for the available list of the ramps.

At delivery, the preload of the differential is adjusted at your request, with no running-in and the cold measured preload.

- If the run-in and hot measured preload decreases between 30 to 40Nm, it will be necessary to change all springs.
- If the run-in and hot measured preload decreases than 40 Nm, it will be necessary to change all springs and the friction/plate disks.

Note Bene: Preload decrease from approximately 15% after 50 kilometers of running.

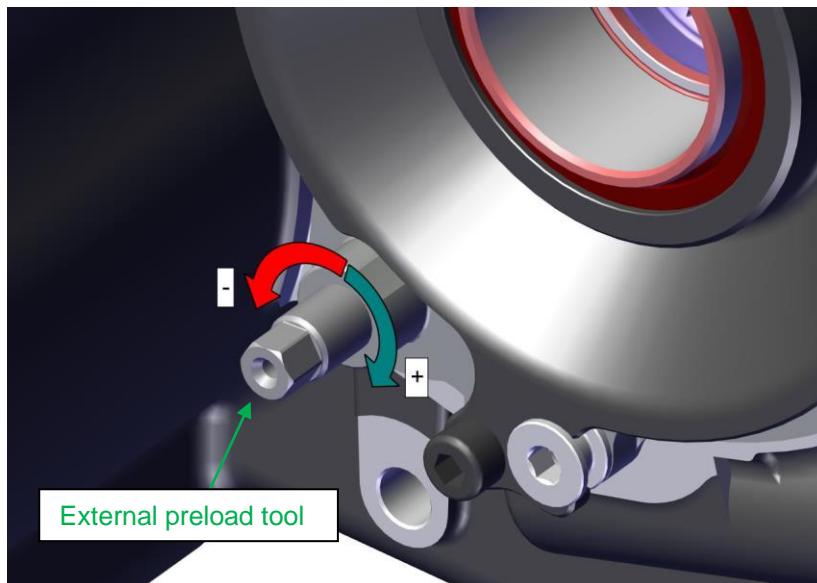

Note Bene: the cold measured preload (workshop) is approximately 15% higher than warm measure.

3. PRINCIPLE OF DIFFERENTIAL PRELOAD ADJUSTMENT ON THE CAR:

- ⚠** It is important to note that the lock nut is made by "clicks" (32 "clicks" per revolution). Then, it is therefore to stop on a "click" to be sure of the good lock nut desired position.

Using a hexagonal socket, press and turn the knob to change the preload of the self-locking device:

More preload = Turning clockwise
Less preload = Turning ant-clockwise

4. LUBRICATION

Oil capacity: 1,5 L (without the cooling circuit)
Lubrication: integrated pump

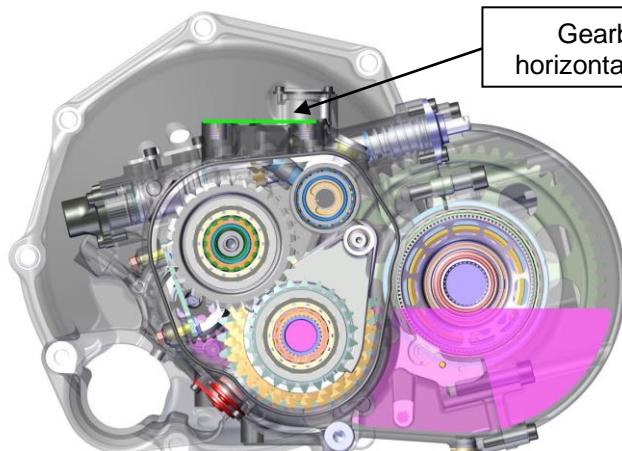

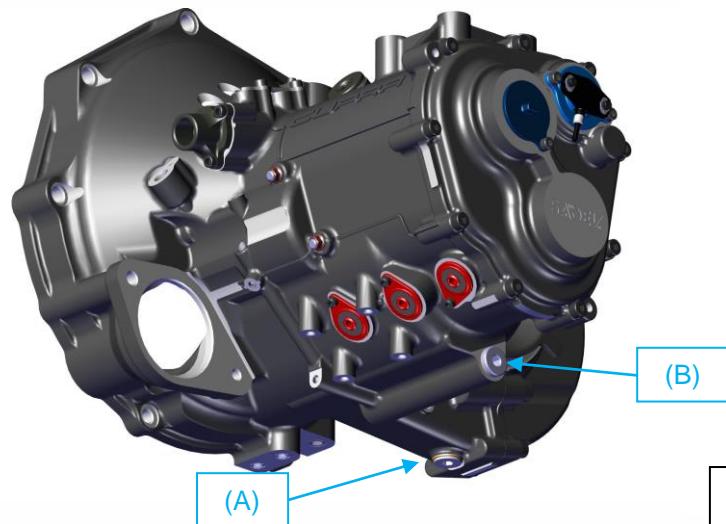

1 st oil change	Oil change	Viscosity
After a 50 km running-in + clean the suction screen	After each meeting or 150km of special stage	75w140

Gearbox cooler:

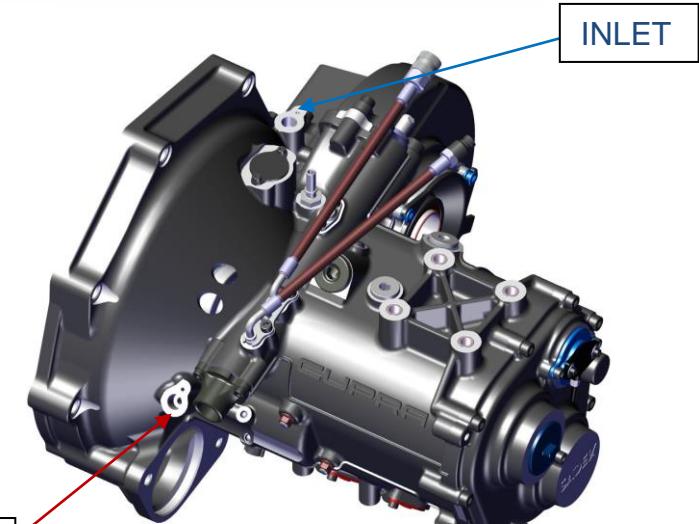

- Not delivered with the gearbox, add **oil matching the cooling circuit capacity**

TO DRAIN THE GEARBOX:

- Disassemble the drain magnet plug (A), and clean it up
- Pump suction screen: SADEV suction screen (B)  **CLEAN THE SUCTION SCREEN AT EVERY OIL CHANGE**

Oil level (with 1.5Liter)

WASHING UNDER PRESSURE:

- When the gearbox is removed, seal correctly all the openings, to prevent any water getting into the gearbox.
- GEARBOX TEMPERATURE: SADEV recommends use in operation between 100°C - 110°C above this temperature, the life of the gearbox parts may be affected.

5. SENSORS

CONTACTLESS ANGLE SENSOR FOR BARREL: +0.5V to +4.5V

SENSOR: F0089072

Nota Bene: Sensor adjusted in our factory = 2.767V \pm 0.05 in 3rd gear

- A: +5Vdc
- B: Ground
- C: Output signal terminal (0.5V to 4.5V) (\pm 1%)
- temperature range: -40 ° C to 140 ° C Max. current: 25mA

Calibration tables

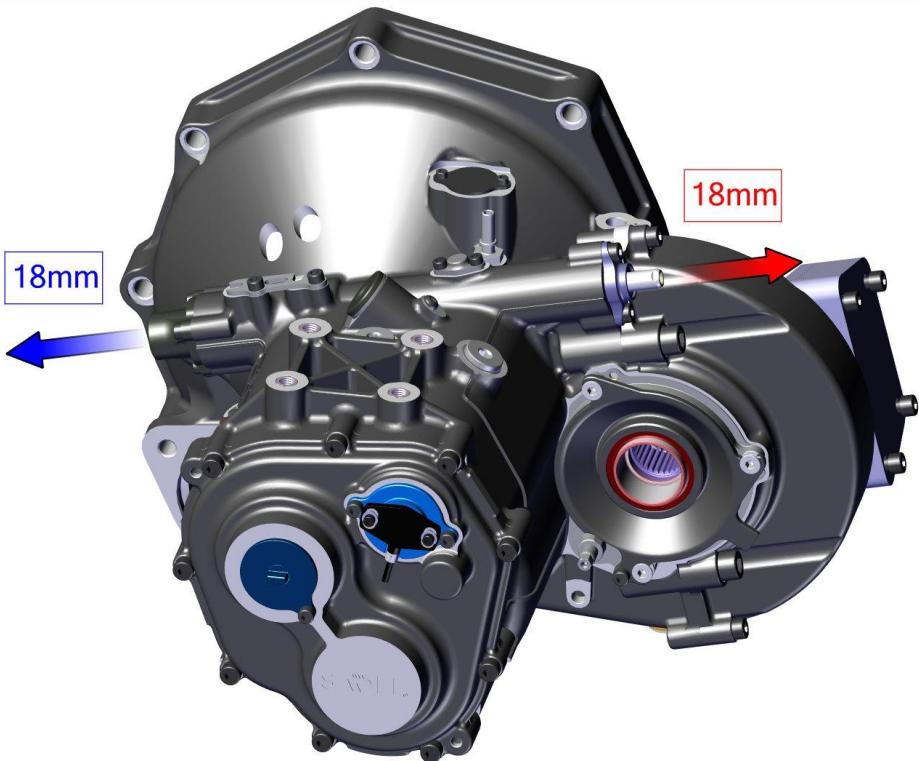

Gears	voltage (V)
R	0.633
N	1.167
1	1.70
2	2.223
3	2.767
4	3.30
5	3.833
6	4.367

GEAR SHIFTING

GRID: R-N-1-2-3-4-5-6

SELECTOR SHAFT THROW: 18mm

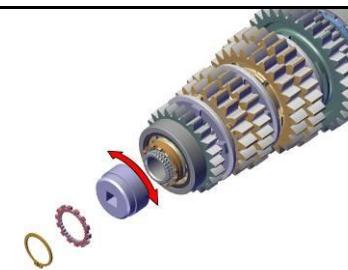

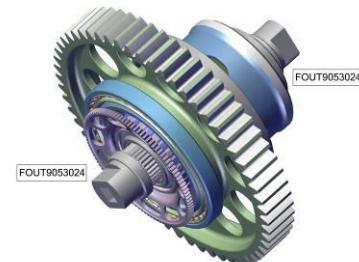

- From Reverse gear to Neutral
- From Neutral to 1st
- Each gear from 1st to 6th

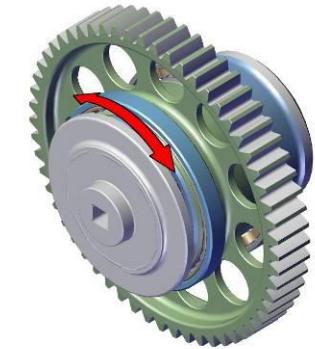

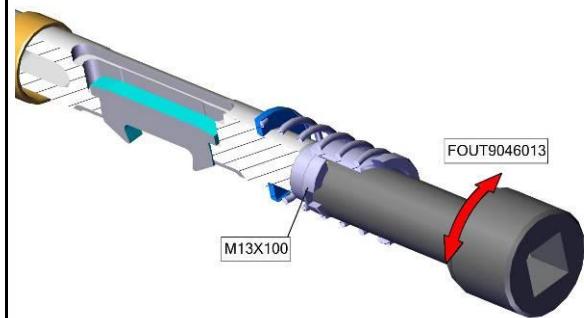

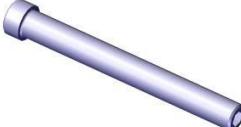

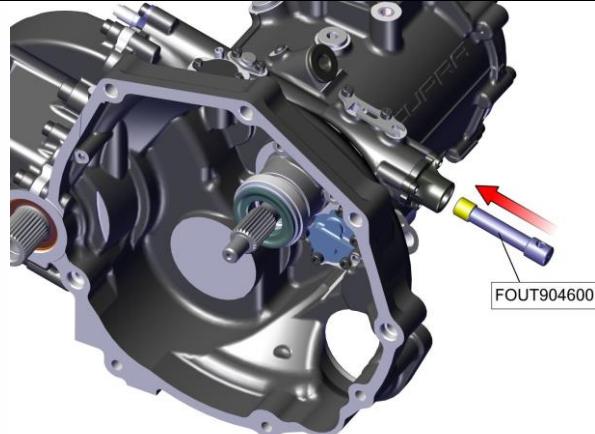

REVERSE GEAR LOCKING SYSTEM:

- From N to 1rst => push the button on the lock rod (on the steering wheel or on the gear level)
- From N to R => push the button on the lock rod (on the steering wheel or on the gear level)
- From R to N => push the button on the lock rod (on the steering wheel or on the gear level)
- From 1rst to N => push the button on the lock rod (on the steering wheel or on the gear level)

6. SPECIAL TOOLS

PICTURE	PART NUMBER	NAME

	FOUT9046001	Selector axle actuator "Only paddle shift"	

7. INFORMATION ABOUT DISASSEMBLY

1) Before any intervention

Unless otherwise stated, all interventions are done with gearbox in neutral, drained and disassembled of the car.
Arrange you a clean and large enough surface to put parts during disassembly.

It is very important to mark the mounting direction of each part during disassembly. When they were run in a direction of rotation, reuse them in the opposite direction may cause premature damage.

For the same reason, sets Fork/Dog ring/Dog ring hub, must always be kept together.

During each disassembly, remove the oil and grease, clean and check state of each part; replace it if necessary.

During assembly, lightly lubricate the bearings, needle bearings and oil pump (if disassembled) with gearbox oil.

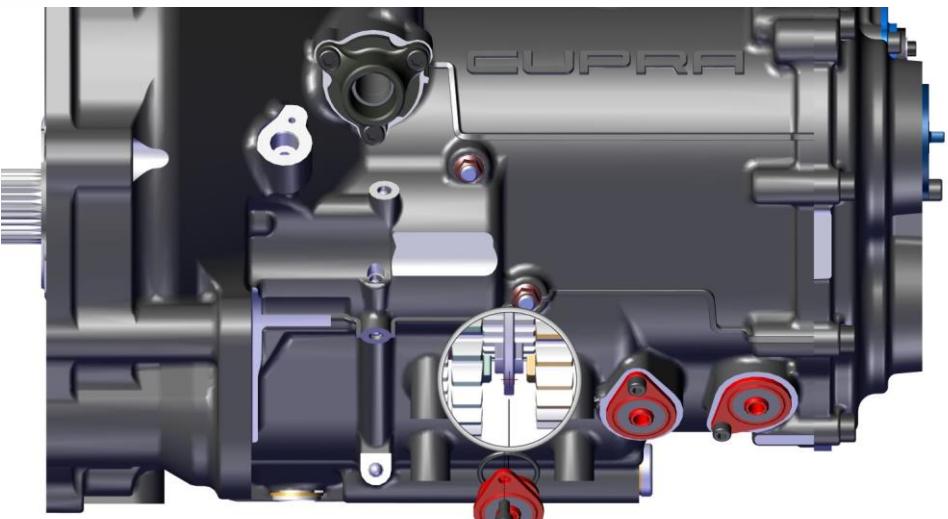

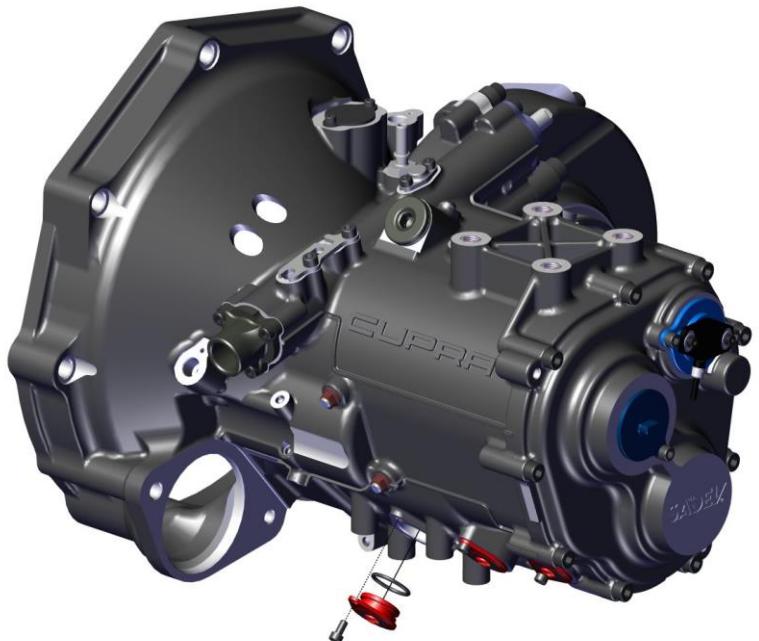

Like for all mechanical system, we advise you to use white pen on all elements subject to loosen.

There are 3 rebuild kits according to technical definition of ST90-17 (see page 33).

8. Information about disassembly

1) Visual inspection dog clutch

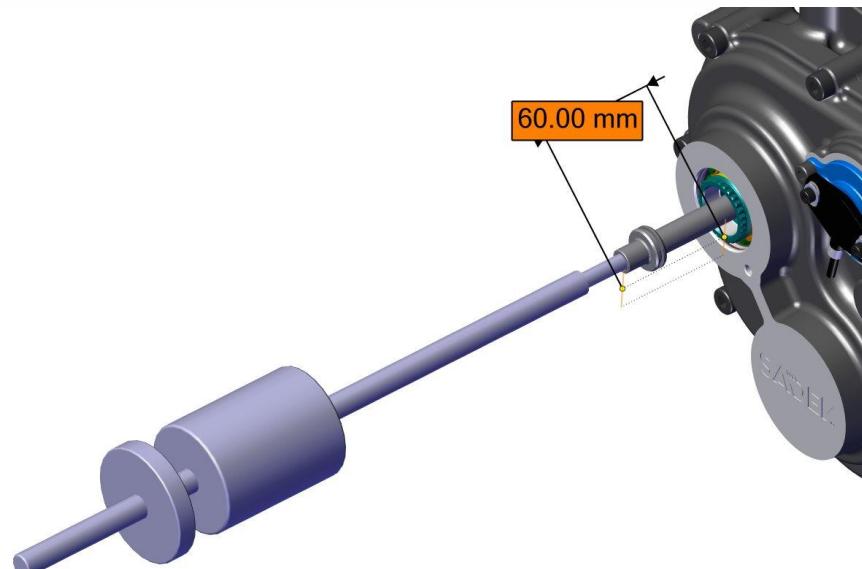

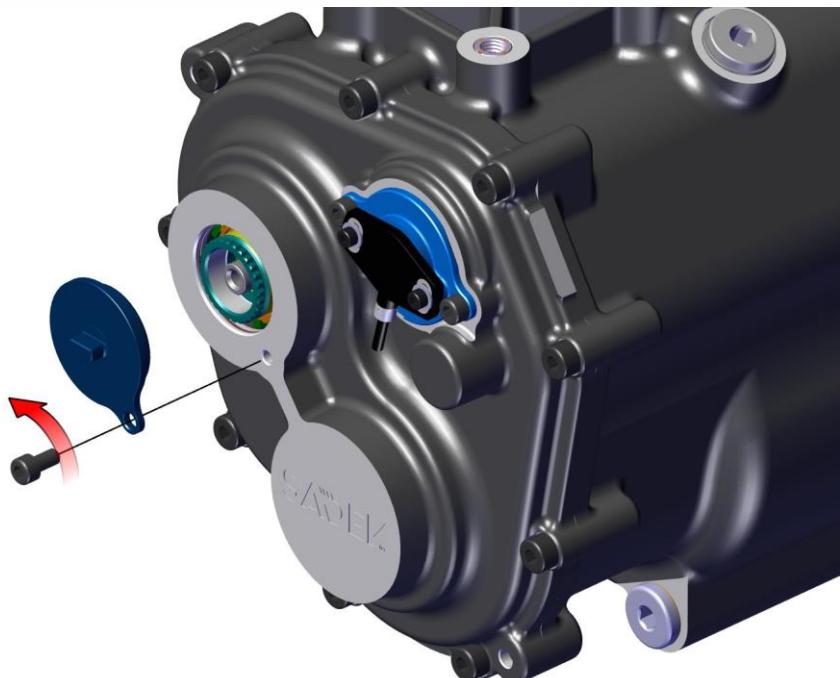

Use the dog inspection caps (A) located on the cluster housing.
Remove the bolt (M5 CHC), the cap and check the dogs. Be careful with O-ring.
The screws are tightened to 10 Nm. and glued with Loctite 222.

2) Retractable clutch shaft.

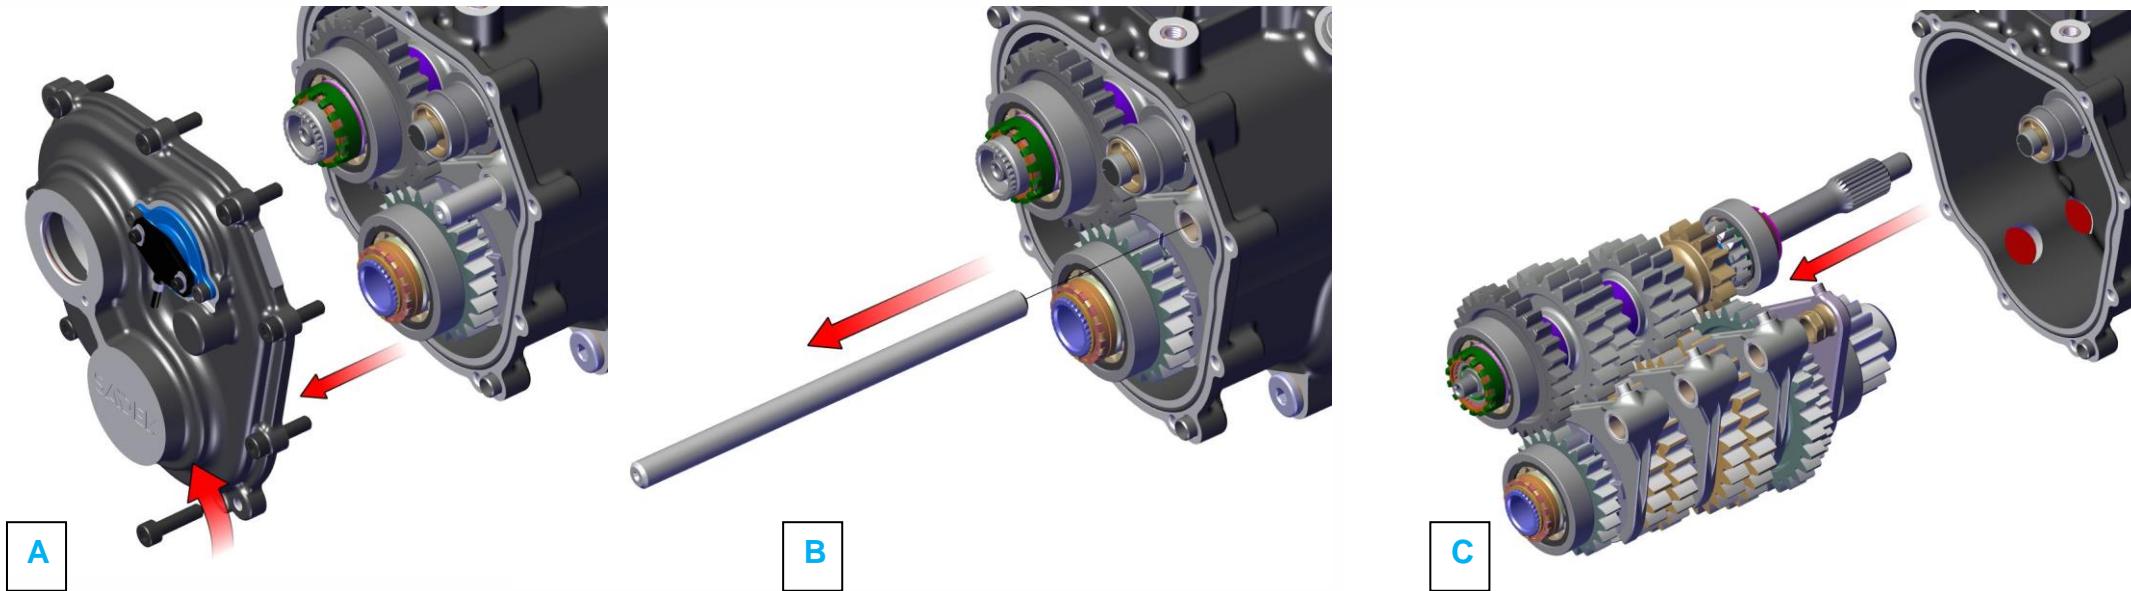

PURPOSE: To facilitate the disassembly of the gearbox on the car.

1. Remove the closing plate from the primary line (1 M6X12 screw)
2. Using an inertia extractor (M8 male tip) retract the clutch shaft about 60mm.

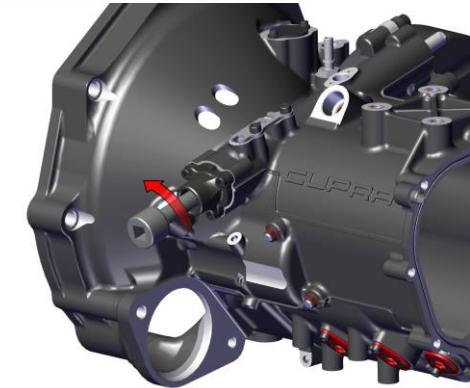

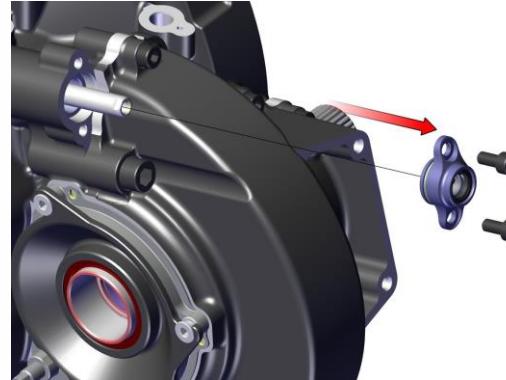

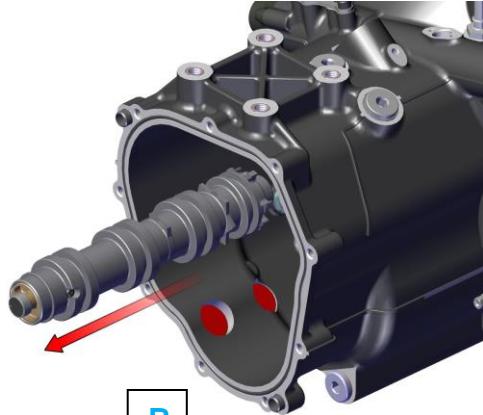

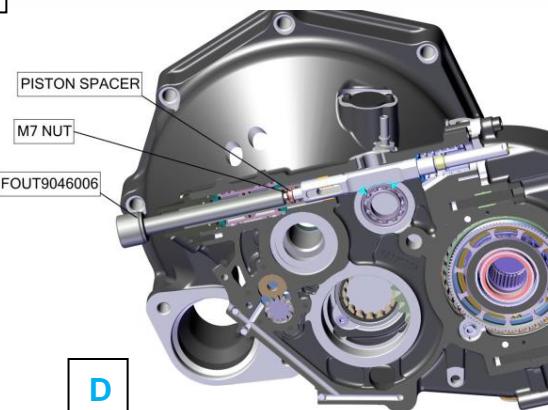

3) Disassembly the geartrains

1. Unscrew the 9 M8x30 screws and gently remove the rear housing. **(A)**
2. Remove the fork axis so as to release the pin from the barrel forks. **(B)**
3. Remove the primary and secondary lines simultaneously. **(C)**

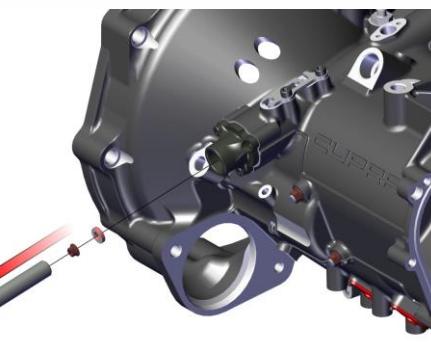

4) Disassembly the selector

1. Remove the complete indexer, as well as the dual pin rock pusher. **(A)**
2. Remove the barrel. **(B)**
3. Unscrew the 2 M7X16 screws and remove the control flange. **(C)**
4. Using the tool FOUT9046006 loosen the M7 nut. **(D)**
5. Remove the nut and piston spacer. **(E)**
6. Turn the control axis 90° counterclockwise and remove the assembly. **(F)**

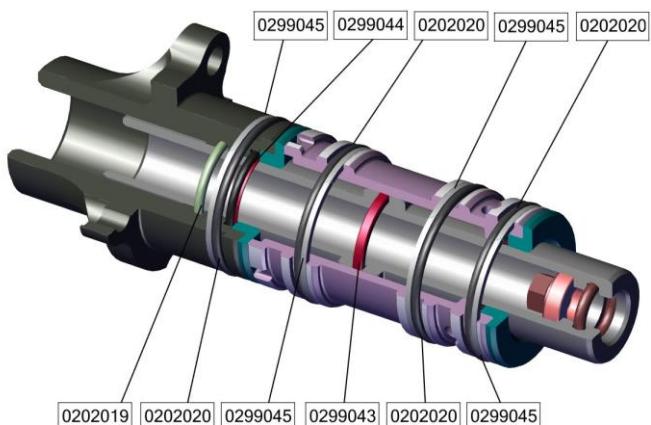

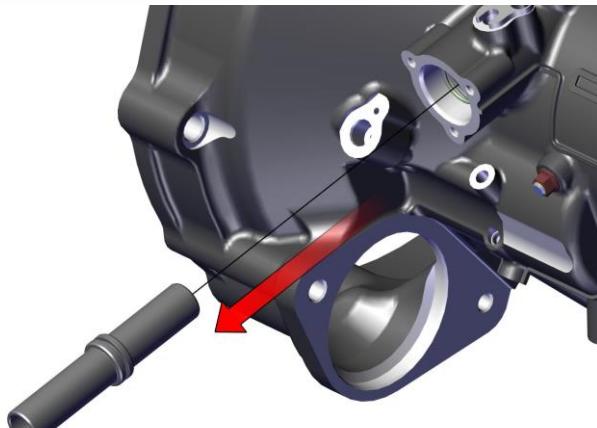

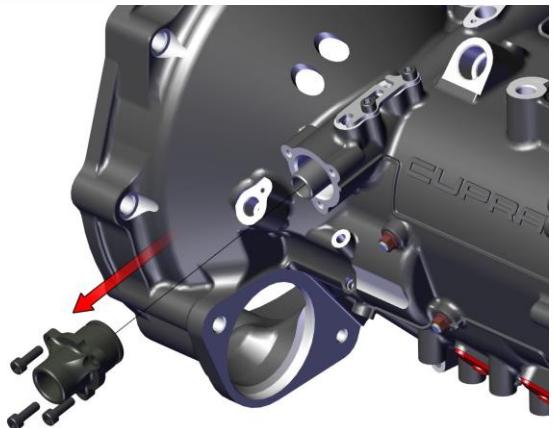

A
B
C
D

E

17

F

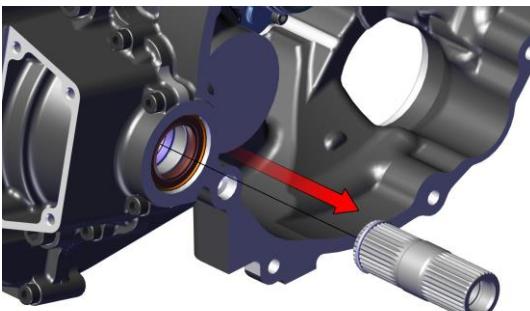

5) Disassembly the piston

1. Unscrew the 3 M6 X18 screws and remove the closing flange.
2. Remove the piston, then with an extractor remove the sleeve and o' rings assembly.
3. Check all parts and reassemble with the KITREVPDBVSLR82142 (See KIT page 33)

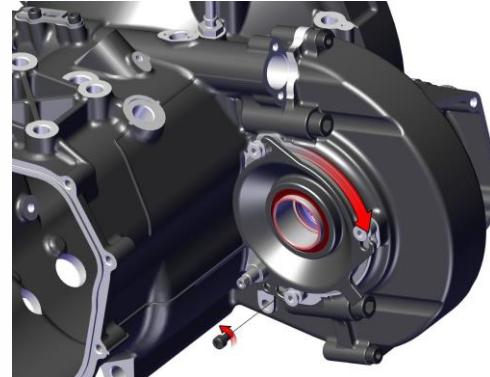

Disassembly the differential

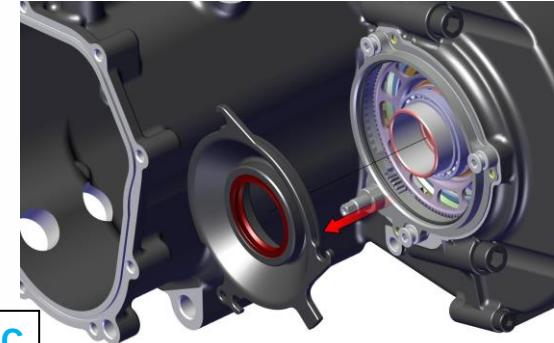

1. Extract the output shaft. **(A)**
2. Remove the M6 x1 2 screw, flange lock, and make a clockwise rotation of the differential closing flange so as to release the lugs. **(B)**
3. Remove the closing flange assembly. **(C)**
4. **CAUTION:** Play with the preload tool to avoid tooth-to-tooth contact when extracting the differential case. **(D)**
5. Extract the differential case. **(E)**
6. Remove the SW60 expander snap ring and unscrew the preload nut. **(E)**
7. Compress the differential cap and remove the differential case circlip. **(F)**
8. Remove all parts from the differential housing by locating the mounting direction of all parts. **(G)**

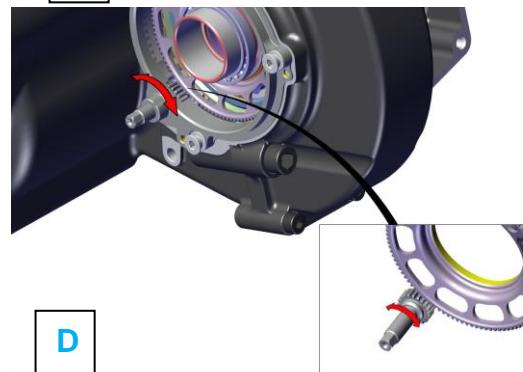

A

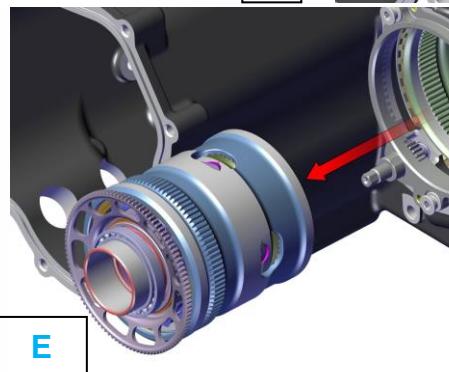

B

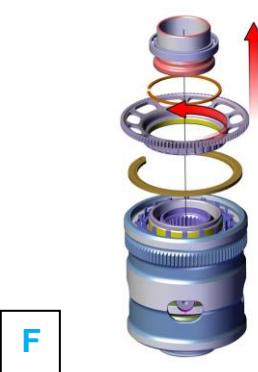

C

D

E

F

6) Disassembly the differential closing housing « crown »

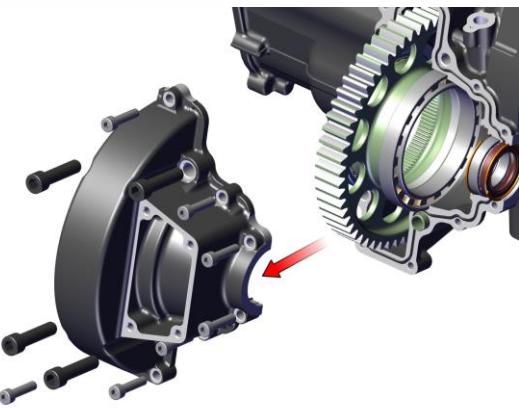

1. Remove the 3 retaining screws « Quick release » (A)
2. Remove the preload tool holder assembly. (B)
3. Remove the 7 M8 x35 screws and the 4 M12x50 screws, gently remove the differential closing housing. (C)
4. Extract the crown and bearing and the bearing 0101054. Remove and change bearings if necessary (D)
5. Remove snap ring, bearing and double lip seal. (E)

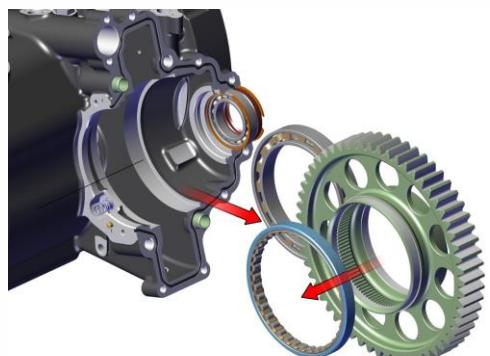

A

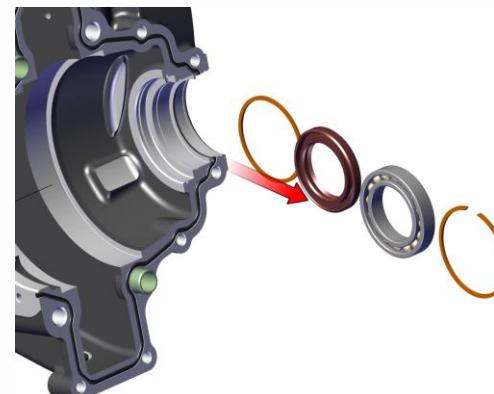

B

C

D

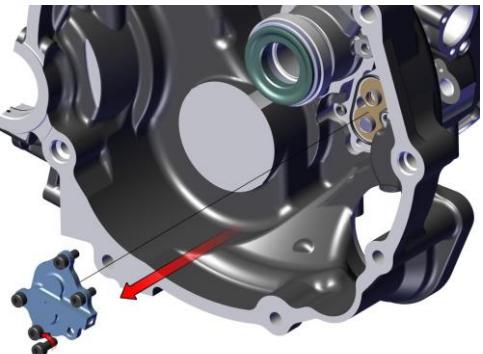

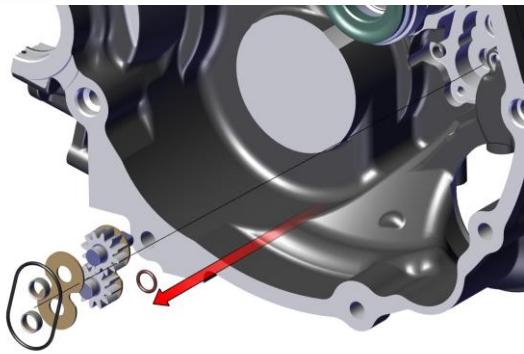

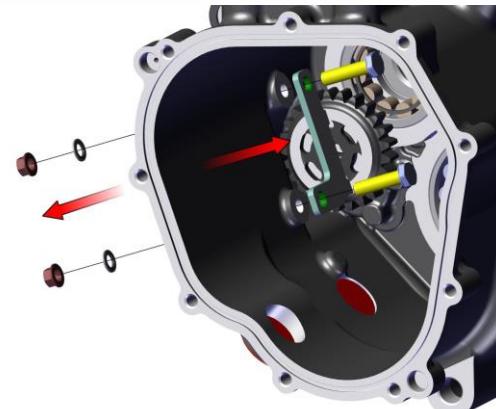

E

7) Disassembly of the pump and drive mechanism

1. Remove the 5 M6x16 screws and remove the pump cover. **(A)**
2. Remove the entire pump mechanism. **(B)**
3. Remove the 2 pump seals. **(B)**
4. Clean the entire mechanism and change the parts if necessary.

Disassembly pump drive wheel

1. Remove the 2 M8x125 nuts and the 2 reverse stop screws and remove the stop plate. **(C)**
2. Remove the drive wheel. **(D)**

**A****B****C****D**

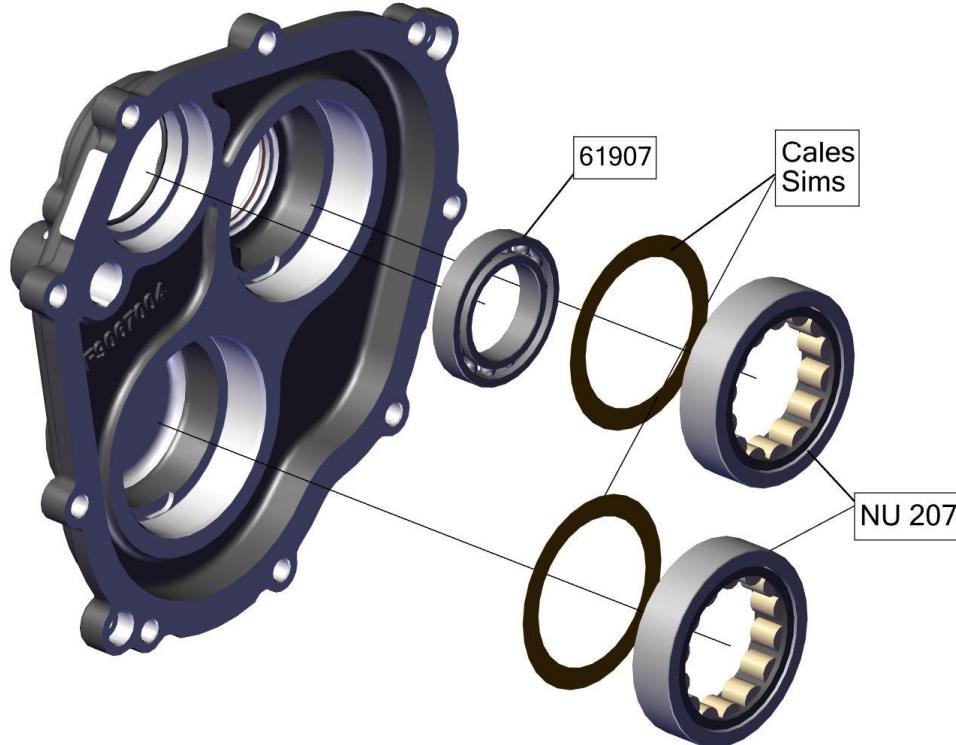

8) Extraction of the different bearings

For the rear housing the barrel bearing "61907" can be removed without heating.

To remove 2 NU207 bearings, heat to 80 ° C if necessary and then using an extractor remove them.

CAUTION: Behind the bearings of the primary, secondary and barrel, sometimes washers may be present.
Clean and reposition them identically before any reassembly of the bearings.

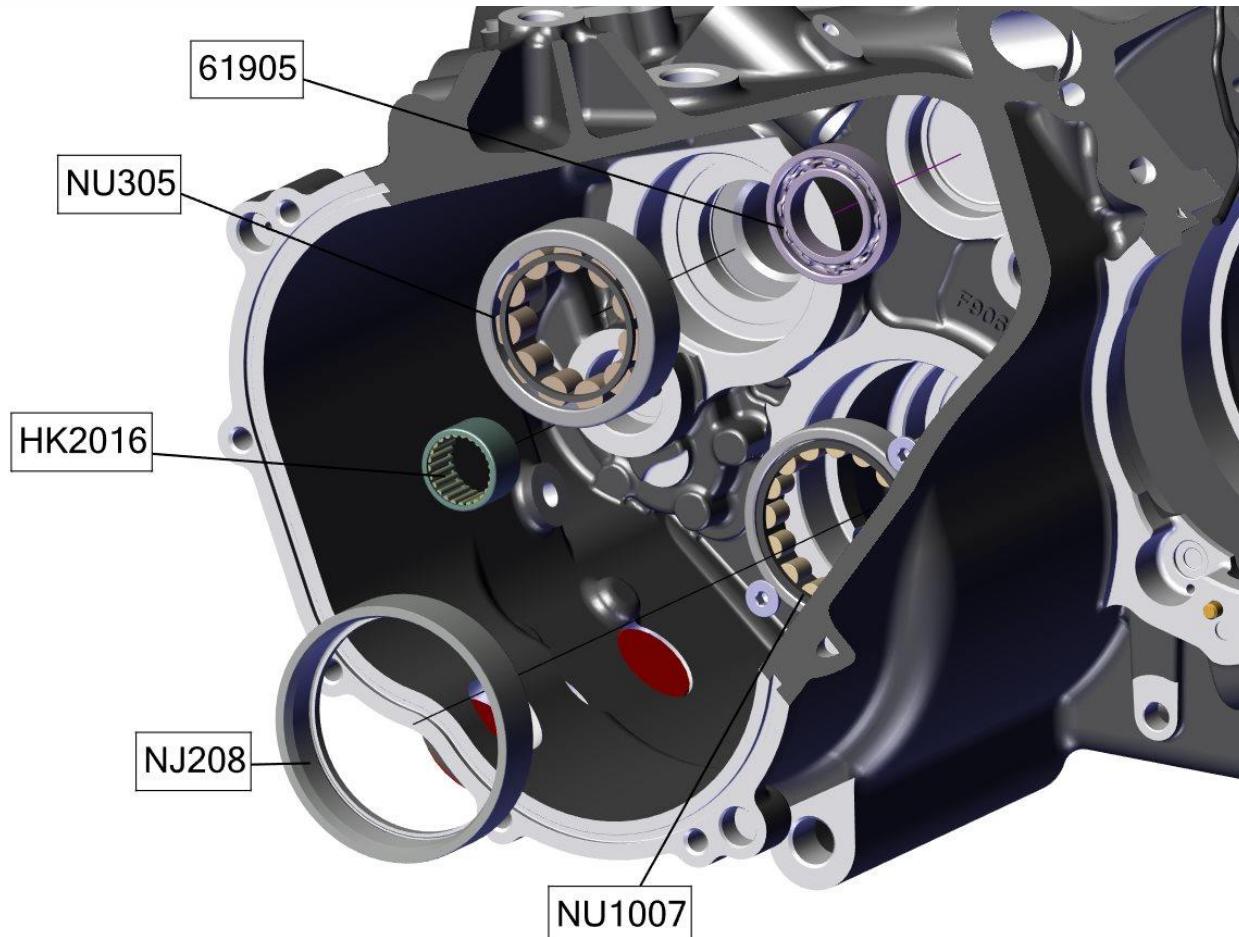

The clearance on the primary and secondary line must be between 0.15mm and 0.2mm

For the main housing, the barrel bearing "61905" can be removed without heating.

The bearing of the NU305 primary line, the outer ring NJ208 and the needle bearing HK2016, heat to 80 ° C if necessary and then using an extractor remove them.

The bearing NU1007, remove the 2 screws M6x100 heat and extract the bearing.

9) Reassembly of bearings

When reassembling, lightly lubricate bearings, needle cages with gearbox oil.

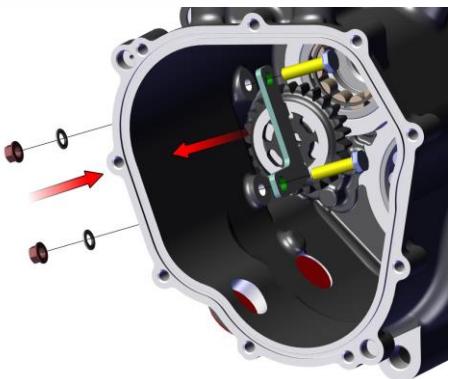

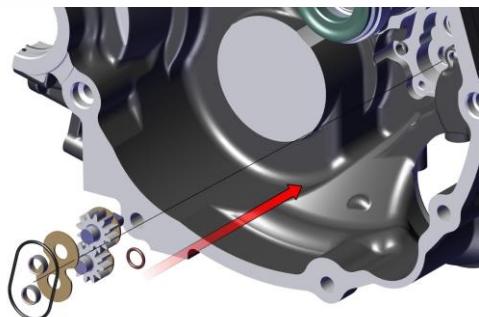

Reposition the different bearings of the main housing as well as those of the rear housing.

10) Reassembly of the pump and drive mechanism

Reposition the drive wheel of the pump, then the stopper with the 2 stop screws and the 2 nuts M8x125 "glued to the loctite243 and tightened to the torque of 35N.m. (A)

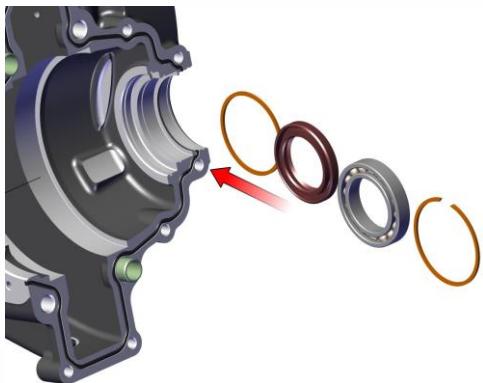

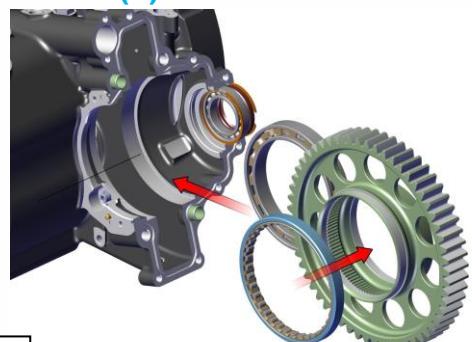

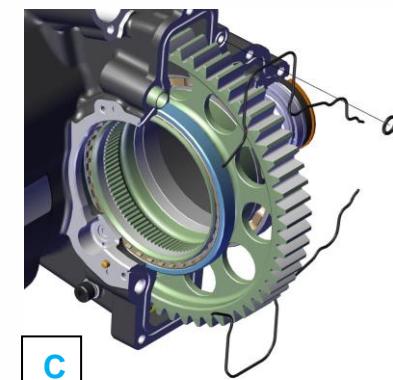

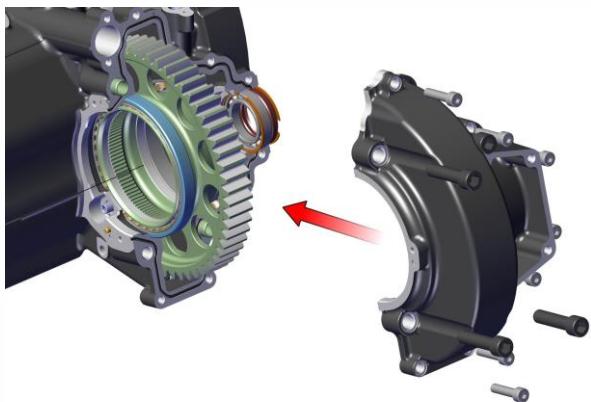

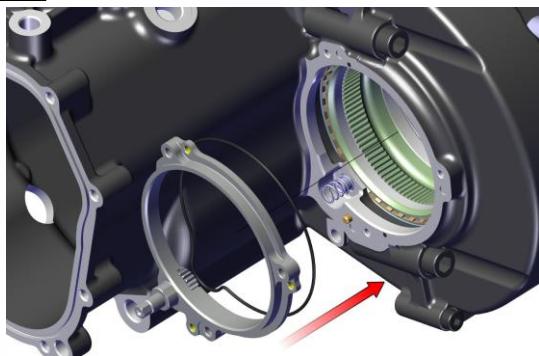

Reposition the 2 pump seals and reassemble the pump mechanism. (B)

Then the cover with the 5 M6x16 screws glued to the loctite 243 and tightened to the torque of 15N.m. (C)

**A****B****C****C**

11) Reassembly of the rear housing and crown

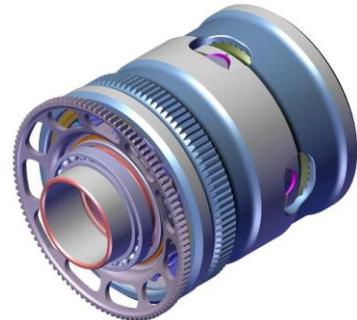

1. Replace the snap ring, bearing and double lip seal. **(A)**
2. Replace the 0101054 bearing and the crown bearing assembly. **(A)**
3. Change the main housing o'ring. **(C)**
4. Reposition the differential housing gently on the main housing with the 4 M12x50 screws glued to loctite 222 tightened to 75N.m torque, and 7 M8x35 screws glued to loctite 222 and tightened to 25N.m. **(D)**
5. Once cleaned, reassemble the equipped preload tool, change the O'ring. **(E)**
6. Screw the 3 retaining screws. "Quick release" **(F)**

A

B

C

D

E

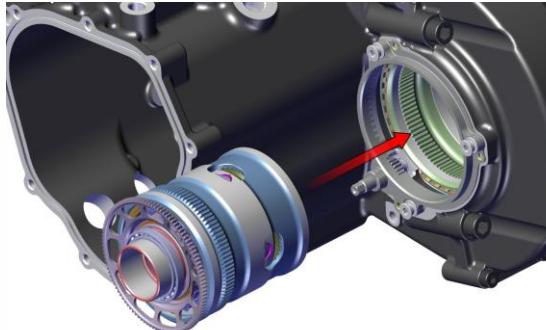

F

12) Reassembly of the differential

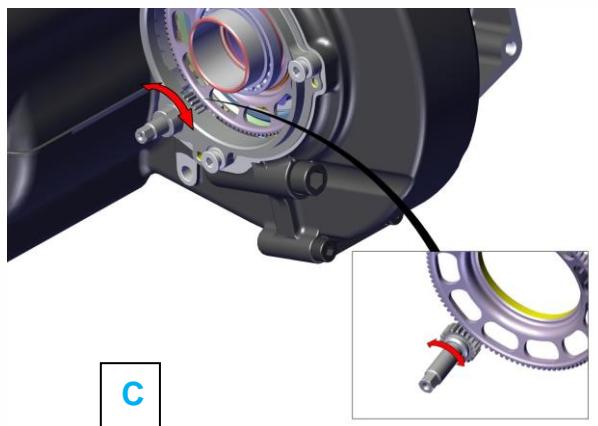

1. Once the differential case is serviced and the internal parts of the differential changed if necessary. **(A)**
2. Reposition the differential case in its compartment. **(B)**
CAUTION: Play with the preload tool to avoid tooth-to-tooth contact when repositioning the cassette. **(C)**
3. Reassemble the closing flange, after changing the bearing and the double lip seal on the left side as well Viton o'ring. **(D)**
4. Rotate a "counterclockwise" rotation of the closing flange so as to lock the lugs. **(E)**
5. Replace the M6x12 screw tightened to 15N.m.**(E)**

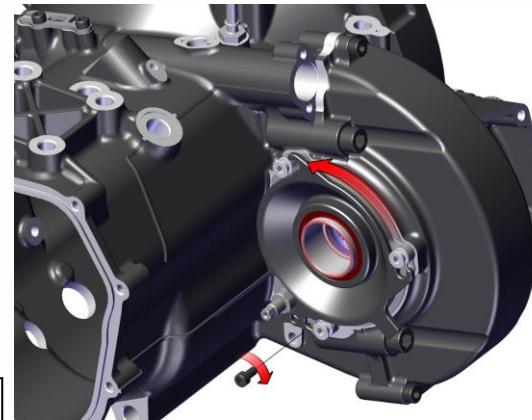

A

B

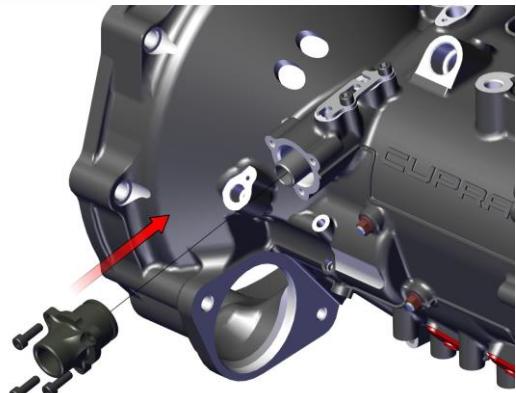

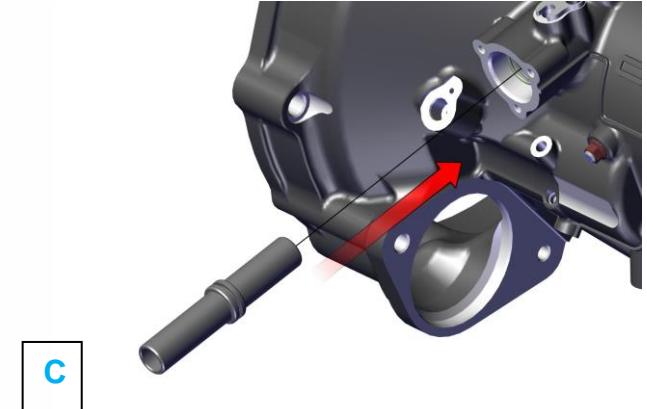

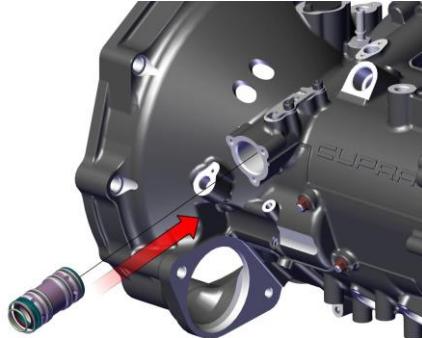

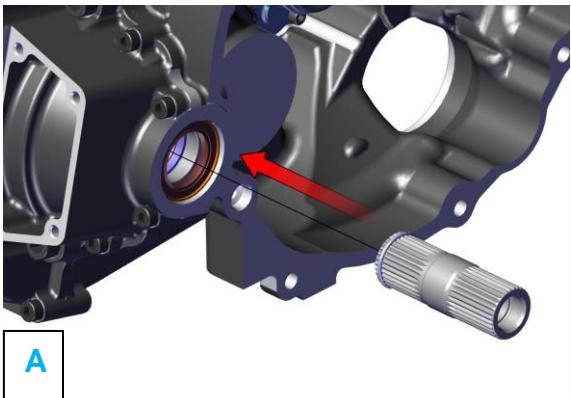

C

D/E

13) Reassembling the selection

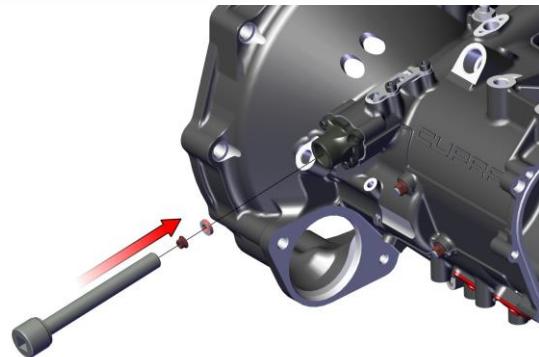

1. Replace the output shaft. (A)
2. After replacing the various seals of the Control Axis Sealing Kit.
3. Replace the sleeve assembly in the main housing. (B)
4. The piston. (C)
5. The piston closing plate equipped with the anti-extrusion ring and its o'ring "M6 screws glued to loctite 222 and torque 15 N.m." (D)

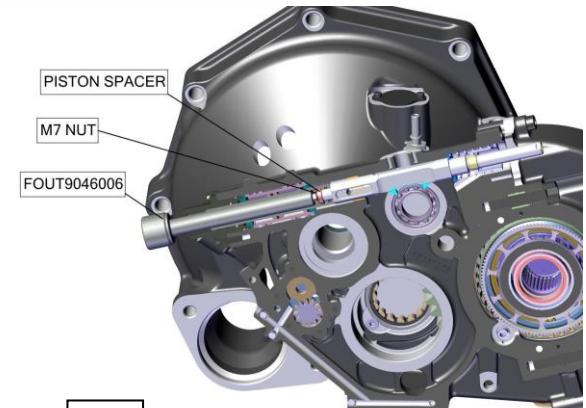

1. After changing the defective parts of the control axis, reposition the control axis **(A)**
2. Using the FOUT9046005 tool screw the M7 nut onto the stud of the control axis "nut glued to loctite 243 and tightened to 25N.m". do not forget the piston spacer. **(B)**
3. Reassemble the selector closing block with 2 M7X16 screws. "Glue loctite 222 torque 22N.m". **(C)**

A

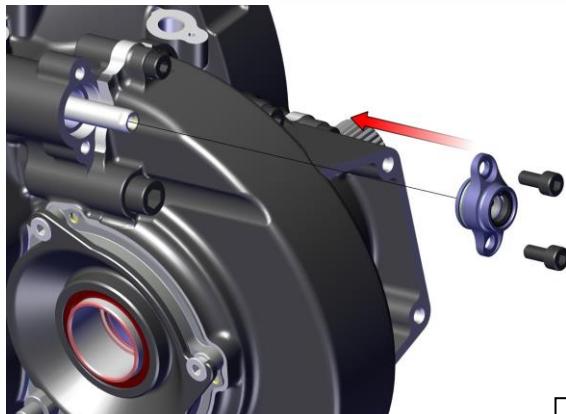

B

B

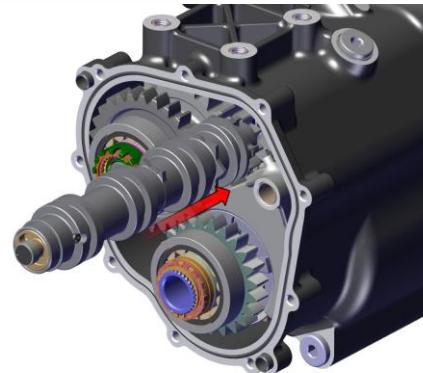

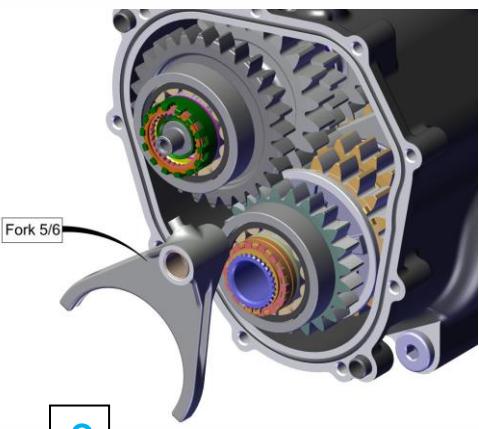

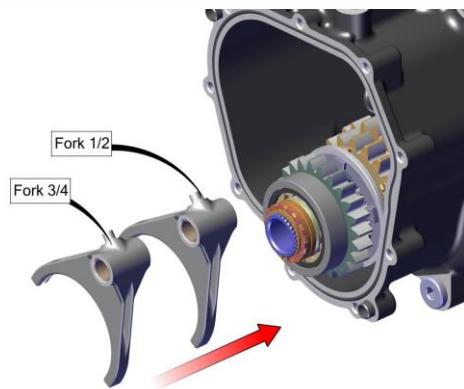

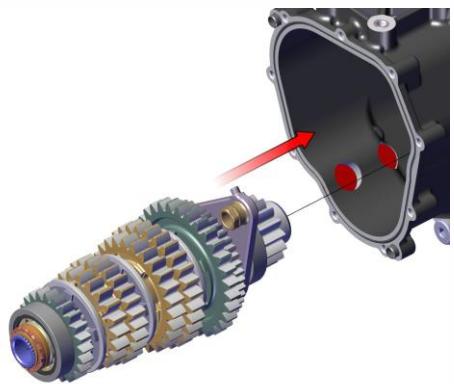

B

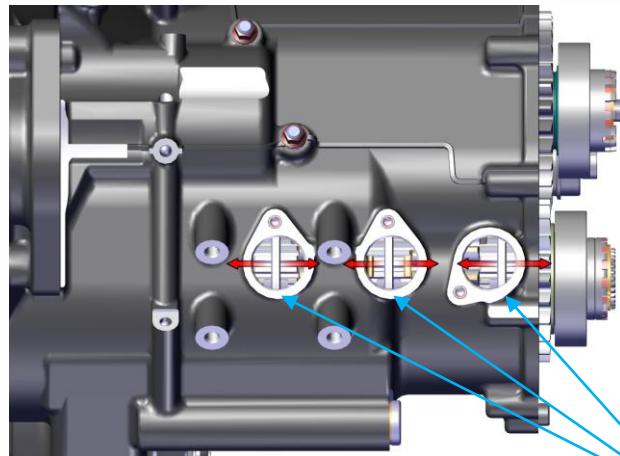

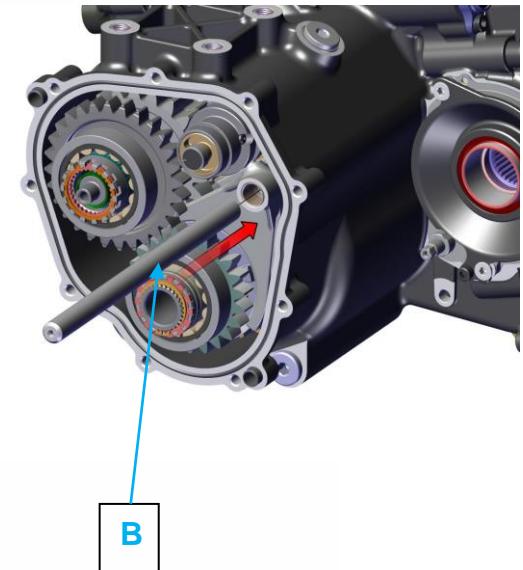

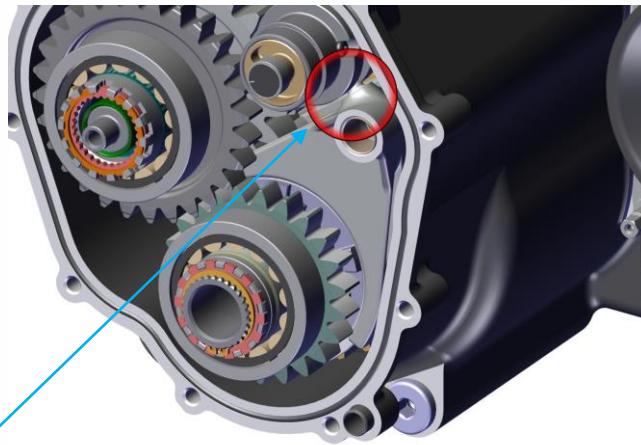

C

14) Reassembly of the pinion

1. Reassemble the secondary with the reverse gear fork. **(A)**
2. Reassemble the 1-2 and 3-4 gear forks. **(B)**
3. Mount the primary line, then the 5-6 forks. **(C)**
4. Reposition the barrel. **(D)**

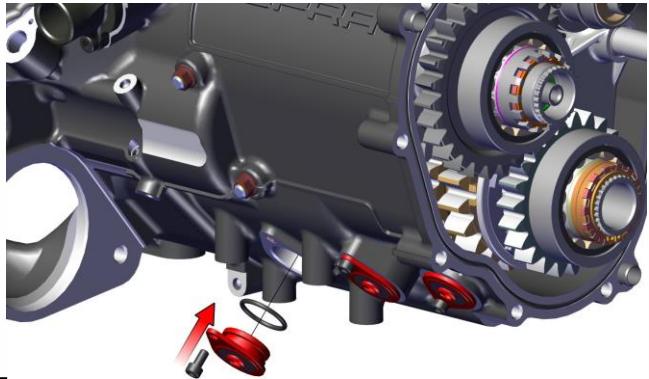

5. Align the dogs ring with the fingers "axial play" through the dog traps to position the fork fingers in the tracks of the barrel. **(A)**
6. Reposition the fork axis. **(B)**

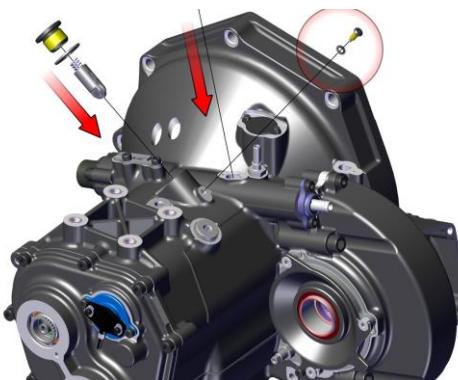

**A**

15) Reassembling the rear housing

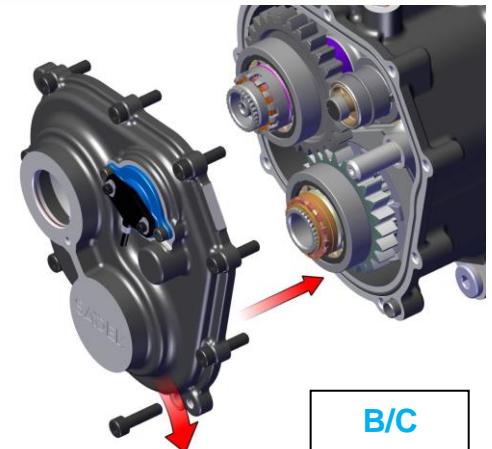

1. Reposition the 3 dog traps. **(A)**
2. After changing the rear housing bearings and the "0201110 Ø200X3" seal of the main housing. **(B)**
3. Reassemble the rear housing on the main housing with the 9 M8X30 screws glued to loctite 222 and tightened to 25 N.m. **(C)**
4. Then reassemble the complete indexor and the complete dual pin rock pusher. **(D)**

A

D

B/C

9. SERVICE PLANNING

The service plan of the gearbox is based on SADEV experiences. The information given about service plan can be updated in the near future.

ELEMENT	PART NUMBER	ACTION	FREQUENCY
Gearbox check-up	All	<i>Complete rebuilding in order to check all the gears. and the differential</i>	<i>800-1000 km, its depends on that you use the category (Rallye/Rallycross) 2000 km for an application on the circuit</i>

1) SADEV factory rebuild

- The gearboxes are delivered plumbed and numbered.
- SADEV will adopt a careful attitude when receiving a gearbox without any 'SADEV' seals. This will also be valid if the gearbox shows minor or major damages.

Returning gearboxes to revision for servicing:

At the time the gearboxes return to us, we follow a strict Receiving procedure, so that we can do a full service complete with bench testing of the gearbox. We must receive the complete product as described below:

- Gear box drained and cleaned.
- Release bearing in place.
- Oil pump in place.
- Lubrication ports closed with the proper plugs.
- Shifters and reverse gears locking, in place.
- Drain plug and drain plug seal in place.
- Differential in place
- A card specifying the kilometres of the special stages and road stages since the last service, available at the end of the technical manual.

Administrative procedure:

1. Contact our sales department.
2. APPROXIMATELY 2 TO 3 WEEKS OF DELIVERY LEAD TIME MUST BE CONSIDERED, please confirm with our sales department.

2) Personal revision

After sale parts for customers who want to proceed with a service by themselves, are delivered only by SADEV sales service.

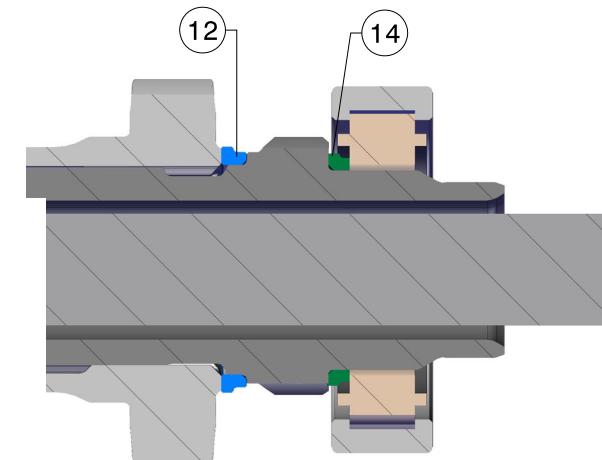

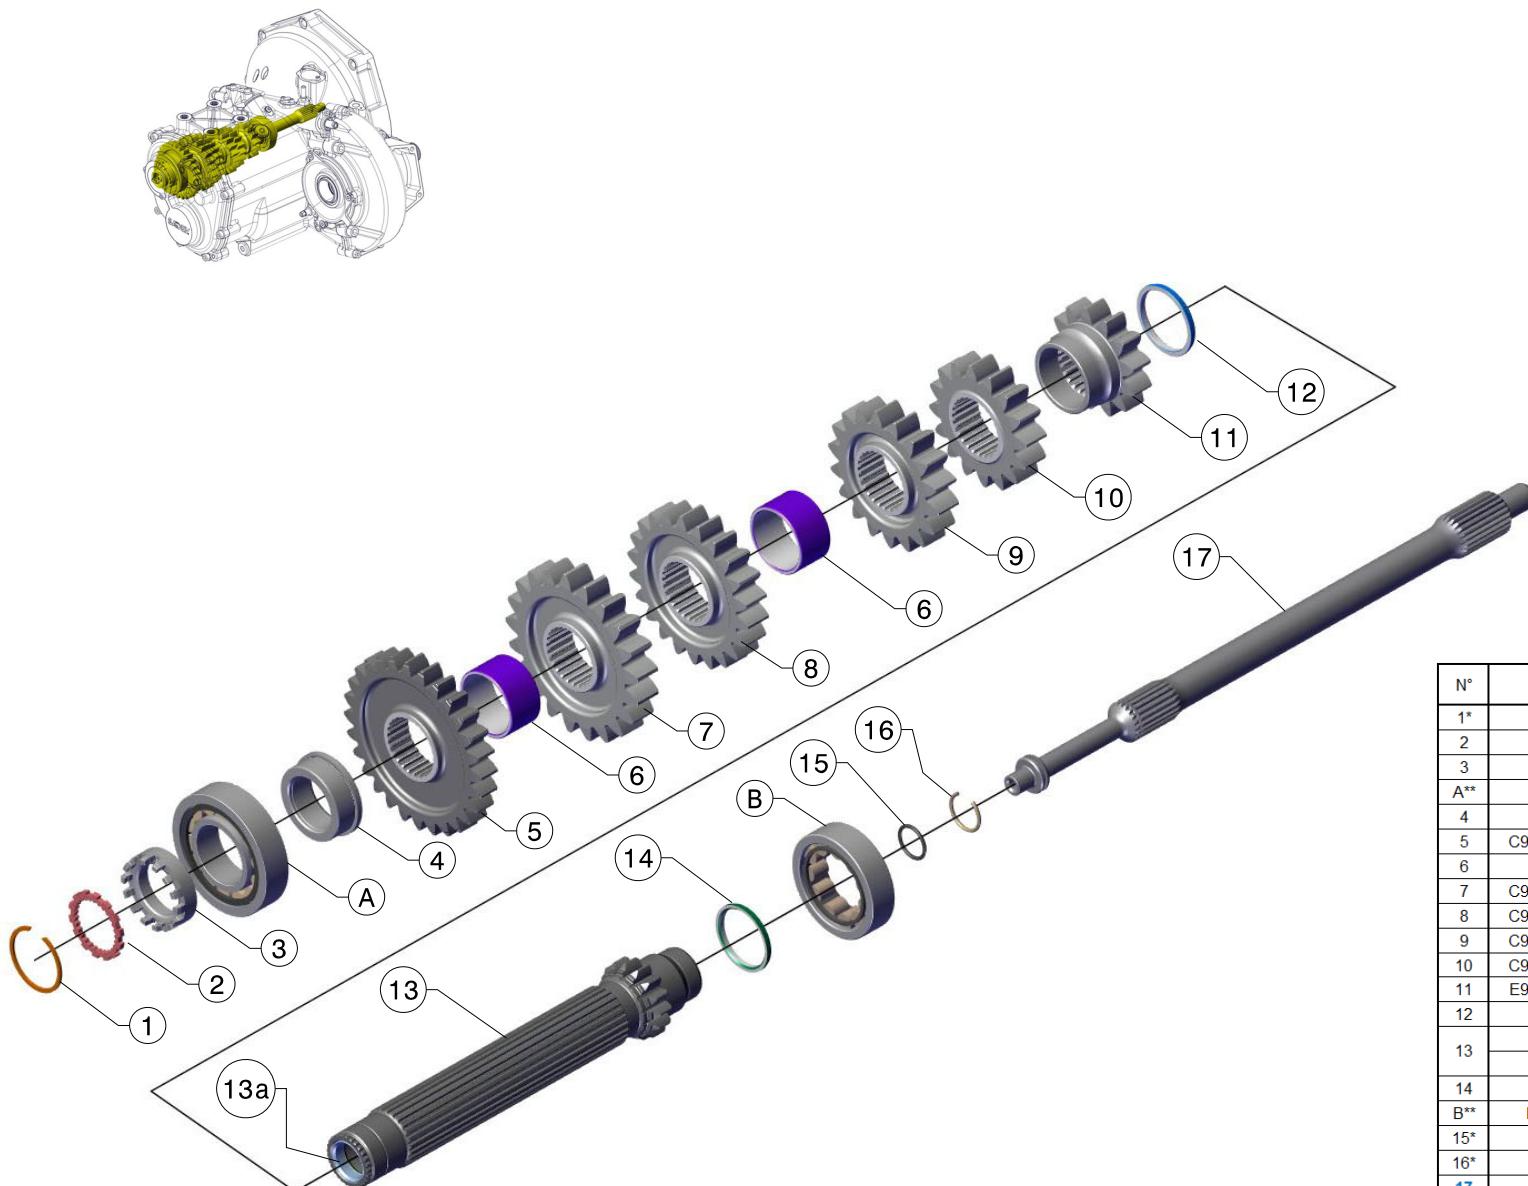

SADEV IS NOT RESPONSIBLE FOR ANY DAMAGE FOLLOWING A SERVICE NOT DONE AT A SADEV APPROVED AGENT/DEALER
